

## CSE-102 Class 6 Notes

### CSE 102 - Class 06

Dinosaurs still alive  
Seminar 3b  
Dewey decimal 001.9  
Library of congress QL89  
cryptozoology  
Study of hidden animals  
bernard heuvelman wrote book reporting there were 20000 sightings of live dinosaurs  
some were frauds  
if dinosaurs are still alive then it doesn't matter if we find dino bones with human bones of footprints  
most cryptozoologist's are evolutionists  
"they survived for 75 million years"  
wrong conclusion

Children have already been brainwashed to say dinosaurs have lived millions of years ago when they don't even know what a million is  
1885 Belgium colonized the Congo  
(Colonized = took precious metals and stones)  
1960 communists came and liberated Congo  
Now it is known as Peoples Republic of Congo  
Used to be Belgium Congo

1910 article called "is Brontosaurus roaming wild in the Congo..."  
Competition of people looking for dinosaur bones  
1948 January 3rd Saturday Evening Post  
3 page article of dinosaurs still living in Congo

In 1932, cryptozoologist Ivan Sanderson was told by tribesmen of a strange creature that left over sized hippo-like footprints, and which they called Mgbulu-eM'bembe  
cryptozoologist Roy Mackel and herpetologist James Powell 1984  
thought it wasn't true but like good scientists they went to investigate any way  
Lets go to the north pole to look for Santa - waste of money  
Most scientists don't want to look for dinosaurs because they 'know' they are extinct  
Congo is the worst swamp in the world  
mosquito's were landing on them at a rate of 1000 per hour  
Cryptozoologist Roy Mackel and herpetologist James Powell set off on their own expedition for mokele-mbembe in 1980. They returned only with interviews with natives who had heard of the long-necked, 30-foot-long creature. They said that around 1959 one had even been killed by natives along Lake Tele to stop it from interfering with their fishing. Their legend stated that whoever ate meat from the animal, died. When Powell showed pictures of various local animals to the natives, they correctly identified them. When he showed them a drawing of a sauropod dinosaur, they said that was mokele-mbembe.  
It spends most of its time under water  
it usually comes out at night  
the people are very superstitious and believe if you talk about it you will die  
Its favorite plant is the Molombo plant

## CSE-102 Class 6 Notes

Similar to Apple but harder

Mackel tried not to lead the natives to an answer so he asked some of them what mok'ele-mbembe was and others he drew a picture and asked the name of what he drew  
Natives killed and ate one in 1959 and everyone either got sick or died  
Didn't know how to clean it properly or it spoiled  
They saw one and described it as dark brown with smooth skin - long neck - small head

Articles are now shunned or edited out of scientific journals if they hint that dinosaurs may be alive because this throws off evolution

Snakes have been found

Guinness Book of World Records - 32ft

Colonel Fawcett shot and killed and measured a 62-foot Anaconda snake. The natives that were with him said, "Colonel, you should see the big ones!"

130 foot Boa was reported in Reuters News Service in Peru

Brazil Columbia border committee killed 98ft 2ft dia 2 tons - 4 men couldn't lift head

Ecuador 100ft - military hunted it down after it killed 2 soldiers

150 ft floated down Amazon River where 9 mi wide - goes to 200 mi wide at Atlantic

Loch Ness monster

1933 there were mountains on both sides - only way in was by river that connects to ocean

1933 road was installed in V shaped groove blasted into side of mountain around the lake

11,000 reported sightings

3,000 recorded

52 reported while blasting was occurring

some are hoaxes to attract tourists

If you get one counterfeit \$20 that doesn't mean they are all counterfeits - bad example - they are all fake

most people describe a pleeseosaur

Long neck - long tail - 4 flippers

Alex Campbell, a water bailiff (game warden) saw it 18 times

Loch Ness very large

6 Billion people could all go and drown in it

dark water - full of peat from shore slowly settling down

10 ft down its black

lake 1000 ft deep

Japanese took 24 boats with sonar

first scan of entire bottom of lake

wrinkled up like a raisin

Caves in bottom

1934 creature washed up on shore of Normandy Beach

1905 Brazil - observers 2 experienced British naturalists

New Zealand - Japanese fishing boat - nets 900 ft down - stunk so bad they threw it back

4 flippers - long neck - long tail - took pieces of it back to have analyzed

96% similar to shark protein

Japanese make stamp that year with picture of it

## **CSE-102 Class 6 Notes**

Fishers knew it was not a Basking Shark

1994 Russia - huge creature washed up on shore  
lots of creatures around the world
